## 1. General Description

CBTMN32 is a low power RF multiprotocol module that is designed for high data rate short-range wireless communication in the 2.4GHz ISM band. Further the module supports SIGMESH protocol and ANT protocol.

The module is based on Nordic Semiconductor chipset NRF52832 radio transceiver IC that has a 32bit ARM Cortex-M4F CPU, Flash memory and analogue and digital peripherals. The CBTMN32 module provides a low power and ultra-low-cost solution for wireless transmission applications. The module also supports NFC-A tag interface for OOB pairing.

## 2. Applications

Due to varied support of protocols and stacks, the CBTMN32 module can support varied applications. A brief of the applications is as below:

- Computer peripherals and I/O devices like Mouse, Keyboard, Multi-touch Trackpad
- Interactive entertainment devices like Remote control, 3D Glasses and Gaming Controller
- Use in Personal Area Networks like Health/Fitness Monitor Devices, Medical Devices, Key-Fobs and Wrist Watches
- Remote control toys
- Beacons
- BT Gateway
- Indoor usage like Home Appliances, Mesh-Controlled Lighting Systems, Color Control for LED Lighting

### 3. Features

## 4. Application Block Diagram

## 5. Interfaces

### 5.1. Power Supply

Regulated power for the SKB369 is required. The input voltage Vcc range should be 1.7V to 3.6V. Suitable decoupling must be provided by external decoupling circuitry (10uF and 0.1uF). It can reduce the noise from power supply and increase power stability.

### 5.2. Function Interfaces

#### 5.2.1. GPIOs

The general purpose I/O is organized as one port with up to 30 I/Os enabling access and control of up to 30 pins through one port. Each GPIO can be accessed individually with the following user configurable features:

- Input/output direction
- Output drive strength
- Internal pull-up and pull-down resistors
- Wake-up from high- or low-level triggers on all pins
- Trigger interrupt on all pins
- All pins can be used by the PPI task/event system; the maximum number of pins that can be interfaced through the PPI at the same time is limited by the number of GPIOTE channels
- All pins can be individually configured to carry serial interface or quadrature demodulator signals

- All pins can be configured as PWM
- There are 6 ADC/LPCOMP input in the 30 I/Os

### **5.2.2. Two-wire Interface (I2C Compatible)**

The two-wire interface can communicate with a bi-directional wired-AND bus with two lines (SCL, SDA). The protocol makes it possible to interconnect up to 127 individually addressable devices. The interface is capable of clock stretching, supporting data rates of 100 kbps, 250kbps and 400 kbps.

### **5.2.3. Flash Program I/Os**

The module has two programmer pins, SWDCLK pin and SWDIO pin respectively. The two pin Serial Wire Debug (SWD) interface provided as a part of the Debug Access Port (DAP) offers a flexible and powerful mechanism for non-intrusive debugging of program code. Breakpoints and single stepping are part of this support.

### **5.2.4. Serial Peripheral Interface**

The SPI interfaces enable full duplex synchronous communication between devices. They support a three-wire (SCK, MISO, MOSI) bi-directional bus with fast data transfers. The SPI Master can communicate with multiple slaves using individual chip select signals for each of the slave devices attached to a bus. Control of chip select signals is left to the application through use of GPIO signals.

SPI Master has double buffered I/O data. The SPI Slave includes EasyDMA for data transfer directly to and from RAM allowing Slave data transfers to occur while the CPU is IDLE. The GPIOs are used for each SPI interface line and can be chosen from any GPIOs on the device and configured independently. This enables great flexibility in device pinout and efficient use of printed circuit board space and signal routing.

The SPI peripheral supports SPI modes 0,1,2, and 3. The module has 3 SPI ports, and their properties are as below:

| Instance | Master / Slave |
|----------|----------------|
| SPI0     | Master         |
| SPI1     | Master         |
| SPI5     | Slave          |

### 5.2.5. UARTs

The Universal Asynchronous Receiver/Transmitter offers fast, full-duplex, asynchronous serial communication with built-in flow control (CTS, RTS), support in hardware up to 1 Mbps baud. Parity checking is supported. It supports the following baud rate in bps unit:

1200/2400/4800/9600/14400/19200/28800/38400/57600/76800/115200.

**Note:** The GPIOs are used for each SPI/TWI/UART interface line and can be chosen from any GPIOs on the device and configured independently.

### 5.2.6. Analogue to Digital Converter (ADC)

The 12-bit incremental Analogue to Digital Converter (ADC) enables sampling of up to 8 external signals through a front-end multiplexer. The ADC has configurable input and reference pre-scaling, and sample resolution (8,10, and 12 bit).

**Note:** The ADC module uses the same analogue inputs as the LPCOMP module. Only one of the modules can be enabled at the same time.

| Module<br>PIN<br>Number | nRF52832<br>PIN Number | Description                                    |

|    |            |                                                |
|----|------------|------------------------------------------------|
| 31 | P0.31/AIN7 | General Purpose I/O SAADC/COMP/LPCOMP<br>input |
|----|------------|------------------------------------------------|

### 5.2.7. Low Power Comparator (LPCOMP)

In System ON, the block can generate separate events on rising and falling edges of a signal or sample the current state of the pin as being above or below the threshold. The block can be configured to use any of the analogue inputs on the device.

Additionally, the low power comparator can be used as an analogue wakeup source from System OFF or System ON. The comparator threshold can be programmed to a range of fractions of the supply voltage.

### 5.2.8. Reset

The reset pin of the module is in the internal pull-high state. When the reset pin of the module is input to a low level, the module will be automatically reset. After the reset pin is used, the parameters of the current setting will not be ANT.

### 5.2.9. NFC

The NFC peripheral (referred to as the 'NFC peripheral' from now on) supports communication signal interface type A and 106 kbps bit rate from the NFC

Forum. With appropriate software, the NFC peripheral can be used to emulate the listening device NFC-A as specified by the NFC Forum.

Listed here are the main features for the NFC peripheral:

- NFC-A listen mode operation
- 13.56 MHz input frequency
- Bit rate 106 kbps
- Wake-on-field low power field detection (SENSE) mode
- Frames assemble and disassemble for the NFC-A frames specified by the NFC Forum

## 6. Module Specifications

## 7. Module Pin-out and Pin Description

### 7.1. Module Pin-out

## 7.2. Pin Description

| Sr. No. | CBTMN32 | NRF52832   | PIN DESCRIPTION                             |
|---------|---------|------------|---------------------------------------------|
|         | Pins    | MCU PIN    |                                             |
| 36      | GND     | GND        |                                             |
| 35      | P0.22   | P0.22      | General purpose I/O pin                     |
| 34      | P0.23   | P0.23      | General purpose I/O pin                     |
| 33      | P0.24   | P0.24      | General purpose I/O pin                     |
| 32      | P0.25   | P0.25      | General purpose I/O pin                     |
| 31      | P0.26   | P0.26      | General purpose I/O pin                     |
| 30      | P0.27   | P0.27      | General purpose I/O pin                     |
| 29      | P0.28   | P0.28/AIN4 | General purpose I/O pin (SAADC/COMP/LPCOMP) |
| 28      | P0.29   | P0.29/AIN5 | General purpose I/O pin (SAADC/COMP/LPCOMP) |
| 27      | P0.30   | P0.30/AIN6 | General purpose I/O pin (SAADC/COMP/LPCOMP) |
| 26      | P0.31   | P0.31/AIN7 | General purpose I/O pin (SAADC/COMP/LPCOMP) |
| 25      | GND     | GND        | GND                                         |
| 24      | P0.02   | P0.2/AIN0  | General purpose I/O pin (SAADC/COMP/LPCOMP) |
| 23      | P0.03   | P0.3/AIN1  | General purpose I/O pin (SAADC/COMP/LPCOMP) |
| 22      | P0.04   | P0.4/AIN2  | General purpose I/O pin (SAADC/COMP/LPCOMP) |

|    |       |                         |                                                             |
|----|-------|-------------------------|-------------------------------------------------------------|
| 21 | P0.05 | P0.5/AIN3               | General purpose I/O pin (SAADC/COMP/LPCOMP)                 |
| 20 | TX    | P0.6                    | General purpose I/O pin                                     |
| 19 | P0.07 | P0.7                    | General purpose I/O pin                                     |
| 18 | RX    | P0.8                    | General purpose I/O pin                                     |
| 17 | P0.09 | P0.9                    | General purpose I/O pin                                     |
| 16 | P0.10 | P0.10                   | General purpose I/O pin                                     |
| 15 | P0.11 | P0.11                   | General purpose I/O pin                                     |
| 14 | P0.12 | P0.12                   | General purpose I/O pin                                     |
| 13 | P0.13 | P0.13                   | General purpose I/O pin                                     |
| 12 | 3.3V  | 3.3V                    | General purpose I/O pin                                     |
| 11 | P0.14 | P0.14/TRACEDATA [3]     | General purpose I/O pin. Trace port output                  |
| 10 | P0.15 | P0.14/TRACEDATA [2]     | General purpose I/O pin. Trace port output                  |
| 9  | P0.16 | P0.14/TRACEDATA [1]     | General purpose I/O pin. Trace port output                  |
| 8  | P0.17 | P0.17                   | General purpose I/O pin                                     |
| 7  | P0.18 | P0.18/TRACEDATA [0]/SWO | General purpose I/O pin. Trace port output. Single wire o/p |
| 6  | P0.19 | P0.19                   | General purpose I/O pin                                     |
| 5  | P0.20 | P0.20/TRACECLK          | General purpose I/O pin. Trace port clock output            |
| 4  | RESET | P0.21/nRESET            | General purpose I/O pin. Configurable as pin reset          |
| 3  | SWCLK | Programming Clock       | Serial wire debug clock input for debug and programming     |

|   |       |                            |                                                    |
|---|-------|----------------------------|----------------------------------------------------|
| 2 | SWDIO | Programming Data<br>IN/OUT | Serial wire debug I/O for debug<br>and programming |
| 1 | GND   | GND                        | GND                                                |

## 8. PCB Design Guide

Please reserve empty area for PCB Antenna when designing a device's board. The empty range minimum size should be 20.6 x 6.88mm. Do check the "PCB footprint and dimensions" for reference.

## 9. PCB Footprint and Dimensions

**Dimensions: 25.40mm x 20.07mm x 1.10mm**

## 10. Electrical Characteristics

### 10.1. Absolute Maximum Ratings

| Parameter              | Condition | Min. | Typical | Max. | Unit |
|------------------------|-----------|------|---------|------|------|
| Storage Temperature    |           | -40  |         | 125  | °C   |
| ESD Protection         | VESD      |      |         | 4000 | V    |
| Supply Voltage         | VCC       | -0.3 |         | 3.9  | V    |
| Voltage on Any I/O Pin |           | -0.3 |         | 3.63 | V    |

### 10.2. Recommended Operating Ratings

| Parameter             | Symbol | Min.   | Typical | Max.   | Unit |
|-----------------------|--------|--------|---------|--------|------|
| Operating Temperature | TA     | -40    | 25      | 85     | °C   |
| Power Supply          | VCC    | 1.7    | 3.3     | 3.6    | V    |
| Input Low Voltage     | VIL    | 0      |         | 0.3xVC | V    |
| Input High Voltage    | VIH    | 0.7xVC |         | VCC    | V    |

### 10.3. Current Ratings

| System State        | TX Peak<br>@ 4dBm | RX<br>Peak | Sleep Mode<br>(Average) | Idle Mode<br>(Average) |
|---------------------|-------------------|------------|-------------------------|------------------------|
| Current (peak) @ 3V | 7.5mA             | 5.4 mA     | 0.4 uA                  | 1.2 uA                 |

## 11. Ordering Information

| Module No. | Shielding | Antenna     |
|------------|-----------|-------------|
| CBTMN32    | No        | PCB Antenna |
